

**AKAGI**  
GOLF  
感覚~力~強さに果てしのない向上

# TECH SPECS

Wedges come into play approximately 30% of the time during an average round of golf. As specialty irons, wedges contribute to 30% of your score and strokes.

AKAGI wedges are created using the newest light density performance metals and technologically advanced surface coatings which have been engineered to drastically reduce glare while helping the club maintain its hardness with a soft feel, flexibility and rust resistance. AKAGI wedge designers succeeded in finding a high performance metal that could both drastically dampen vibration and yet be effortlessly manipulated and engineered for optimum functionality. The metal is less dense than ordinary steel yet it maintains and manipulation properties of cast or forged carbon steel offering a pure, soft feel. Its head is designed with a deeper center of gravity with more weight positioned within critical high-stress areas to further improve feel and performance while giving the wedge a solid, "muscle-back" appearance.

-  Each AKAGI wedge is encased in a distinctive glare-reducing carbon finish which gives the club an exceptionally soft feel. AKAGI wedges are characterized by some of its more prominent features:
-  **Turf Glide® System for Effortless Divots**  
Cuts through surfaces like a hot knife through butter (MORE GOLF BALL LESS REAL ESTATE)
-  **Gear Grooves® for Grip & Spin**  
Square profile grooves give better bite-release to create just the right ball spin and velocity at impact it dramatically increased spin on hard cover distance balls (LESS IS MORE)
-  **Enhanced Sweet Spot for Extra Forgiveness & Stability**  
By using specialized metal technology the Clubface of the wedge is engineered to feel pure and soft like cast or forged carbon steel; even on mis-hits (POWERFUL SHOT THAT FEELS INCREDIBLY SOFT)
-  **Alignment Aid for Contoured Control**  
Large, circular face shape of the wedge combined with its high toe allows you to hit with far greater accuracy and control (ROUND IS THE SHAPE FOR THINGS TO COME)
-  **High Visibility Club Face for Improved Contact**  
A carefully marked ball bracket indicates where primary contact with the ball ought to be, in order to execute optimal shots (TIME TO FACE THE FACTS)
